

05/29/2015

Dear Kevin:

Further to your request, our laboratory tested your base material sample (our code TPOVX7000) for the UL94 Standard of Ignition Characteristics of plastics materials. This analysis was conducted using standard industry procedures and apparatus.

From our testing we obtained the following result –

*TPO1 (TPOVX7000) - passed the UL94 test utilizing the 3.0 mm bar for a HB rating.*

This test was done on a single sample only. Further confirmations are available as required as part of any toll processing services we may provide you in the future. This note does not constitute a UL Yellow Card rating, but confirms that we have conducted the test as required with the results noted above.

Thank you,

*D.A. Berrill*
