

December 10, 2014

Our supplier is one of the largest manufacturer / supplier of recycled Pellets in North America. Our reprocessed pellet is made from 100% post-consumer parts. Our process of collection and recycling is performed in the most energy efficient ways further reducing our carbon footprint. UltraBaseSystems is taking the right steps in “Green Thinking” by purchasing and using 100% recycled Pellets for their sports field, landscaping and golf systems.

Not only are these 100% recycled pellets being manufactured into new products they are also 100% recyclable once the panels for the systems have come to their “end of life”. This innovative thinking has diverted millions of pounds from landfill and will continue to do so in a closed cycle so that the material being used should never end up in landfill.
