UltraBaseSystems®

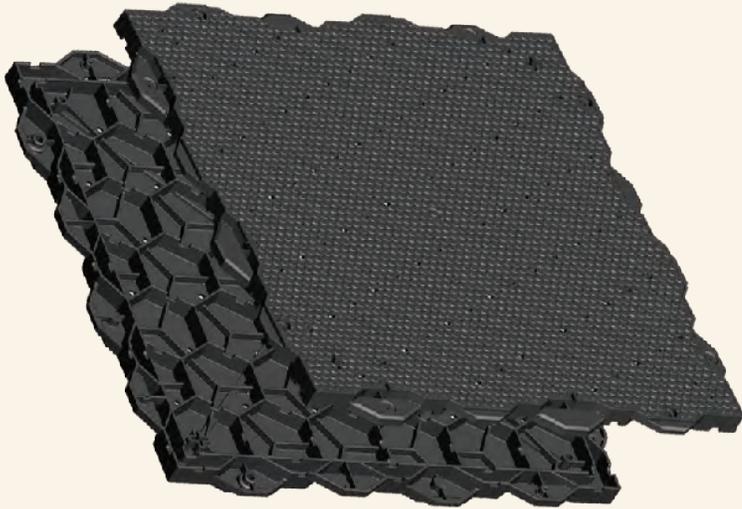

The Most Versatile Base System in the World

The Most Benefits

The Proven Foundation for a Perfect Installation

UltraBaseSystems® is first and foremost a structurally engineered sub base replacement system which successfully addresses the safety, drainage and aesthetic demands of an entire industry.

Engineered Locking Expansion Joints

Non-Slide Turf Barbs (Reduced Turf Movement)

Perfect Planar Alignment Between Panels

Water Storage Capacity

Vertical and Horizontal Drainage

Structural Support Ribs

SAFETY

The Ideal Balance Between Safety and Playability

- Energy Absorbing Design Supports Enhanced Safety
- ADA Compliant

CONSISTENT PERFORMANCE

Innovative Design Ensures Years of Consistent Play

- Smooth transition from panel to panel
- Overcomes sub base irregularities

DRAINAGE

Elevate Your Drainage System to a New Level

- Panel design permits superior vertical and horizontal flow
- Patented design permits water storage capacity under the panel

INSTALLATION

We've Never Met an Installation We Didn't Like

- Reduces heavy equipment and skilled labor requirements
- No site limitations

LIFE-CYCLE COST

Never Lose Your Investment

- Significantly less base work and aggregate are required resulting in lower fuel costs and associated emissions.
- State-of-the-art engineering and manufacturing allows for reuse and relocation.

LOAD BEARING

Tough Enough to Drive On

- Accommodates high vehicular and residential traffic
- Heavy equipment will not damage or displace the panels during field removal and installation
- UBS Panels reduce and/or eliminate the need for an outdated compacted rock base

COST SAVING

The Most Cost Effective Base Money Can Buy

- Quicker, more efficient base and turf installation
- Less Fuel and Labor Required

SUSTAINABILITY

Helping to Save the Earth One Panel at a Time

- UltraBaseSystems' panels are made from 100% recycled material and is recyclable
- Saves fuel resulting in reduced carbon footprint

* All panels measure 28" x 28" (711.2mm x 711.2mm)

The Most Possibilities

Athletic Fields

The dream of constructing world-class sports fields in days, or weeks—not months—in virtually any location with unsurpassed safety, drainage and playability is finally a reality.

Rooftops

The lightweight panel system delivers vertical and horizontal drainage, structural superiority underfoot, and the flexibility to follow any rooftop inconsistencies making it the perfect choice for converting unused rooftops.

Golf

It's all about perfect ball roll and UBS greens deliver perfection with every stroke. Dead flat or contoured to challenge any skill level, UltraBaseSystems® improve golfers' games on every continent in the world.

Pet Areas

Designed to drain, UBS allows pet waste to wash through the panels and be absorbed into the ground just like nature intended.

Athletic Courts

UBS panels allow for the construction of a home or corporate court where zoning restrictions, lack of accessibility or the need for temporary recreational courts come into play.

Landscape

UBS makes installing landscaping turf in any commercial or residential location easier and faster than ever before. Owning a no maintenance synthetic turf lawn has never been more practical.

Pavers and Bricks

If you thought installing concrete or brick pavers was just too labor intense, think again. Chose a location, remove the existing grass, compact and install the UBS panel system.

Playgrounds

Kids fall down, that's a fact all parents have come to accept. UltraBaseSystems understands this behavior and is driven to create the safest, easiest to install playground system on the market today.

Athletic Training Facilities

A shift in the way that athletes train is changing the requirements needed for training facilities across the globe.

The Most Efficient Installation

UltraBaseSystems' ease of installation is a game changer because it is designed to be installed virtually anywhere! Poor weather conditions, lack of accessibility or availability of materials, limited installation schedules or inexperienced work crews are no challenge for UltraBaseSystems. In many cases, our proven installation method is as easy as one, two, three:

**Consulting a design engineer prior to installation is recommended
* Provided that the sub base is stable and of good quality*

Testimonials

University of Chattanooga

“ We are just so excited to have the U.S. Women's team playing in Chattanooga on our new field with the UltraBase system. It's great knowing that the best team in the world will be playing on the best system in the world.”

—Paul Smith,
Executive Director of Finley Stadium

Tampa Bay Rays MLB

“ In a little over two days the Tampa Bay Rays had a great new field and the players, coaches and staff couldn't be happier. A true testimonial to the system is that immediately after a two-inch rain fall, our field was completely drained and the only area at the facility that was playable, allowing valuable practice time to continue. Rays VP of Operations and Facilities and a Stadium Manager's Association board member Rick Nafe was quick to say, “The field installation was completed extremely fast with no mess to our facility. This field feels great underfoot, and the ball bounces and rolls just like real grass, what more could you want from a synthetic turf field. We love it!”

—Rick Nafe, VP of Operations
