

Horizontal Water Flow Rate Calculations- UltraBaseSystems Standard Panel

Panel Area	784 sq in 0.605 sq yard
Water outflow	5 gallons in 55 seconds* Flow rate = 0.0909 gal /s = 5.45 gal / min = 5.45 / 0.605 gal / sq yd / min = 9.02 gal / sq yd / min
Rainfall equivalent	5 gallons per 784 sq in = 1155 cubic inches per 784 square inches = 1155 / 754 inches rainfall depth = 1.47 inches rainfall depth
Rainfall equivalent flow rate	= 1.47 inches per 55 sec = 0.0268 inches per second = 0.0268 x60 x60 inches per hour = 96.4 rainfall equivalent inches per hour
