

# UltraBaseSystems® Installation at a Glance

## 1 Ground Preparation

Consult with a professional engineer to evaluate existing soil conditions and drainage capacity. The goal is simple, create a well compacted proper draining sub base.

## 3 Install UBS Panels

Evaluate the installation requirements and budget considerations to help determine the best UltraBaseSystems product for the job.

## 2 Install Geosynthetic Fabric

Installing a geosynthetic stabilization fabric helps ensure the stability and regulate drainage in the prepared sub base.

## 4 Install Turf

Install any turf product by utilizing many of the same methods used when installing on a stone base.
